

GENERAL INFORMATION

INSTALLATION

Installation must comply with the current British Standards and Building Regulations. Comprehensive technical information can be found in the installation manual which is supplied with every boiler.

CONVENTIONAL FLUES

Grant boilers have extremely high efficiencies which result in lower flue gas temperatures. It is important to use the correct size of flue as specified in the installation manual.

FUEL

All burners are supplied factory set at a mid-range output (except Combi's) for use on standard grade kerosine – Class C2. The burners can be reset on commissioning to operate on Class D, gas oil, but only for conventional flue applications of 70,000 Btu/h output and above. High level and vertical balanced flue kits can also be used subject to complying with the relevant building regulations. Note: Outdoor Modules are not suitable for Class D gas oil unless fitted with a high level or vertical flue. It is important that your fuel supplier is advised to deliver the correct grade of fuel.

ELECTRICAL CONNECTIONS OUTDOOR ONLY

Outdoor modules are supplied with a factory-fitted control panel, incorporating mains isolating switch, test switch, boiler and overheat thermostats and a frost thermostat pre-set to 5°C. A four core and earth cable connection is required providing a permanent live supply to the frost thermostat.

SYSTEM PROTECTION (OUTDOOR ONLY)

The fully weatherproofed outdoor modules have a high degree of insulation and are designed to cope with seasonal temperature variations. Whilst the boiler is supplied with a factory-fitted single pole frost thermostat, consideration should be given to protection of the system as a whole against prolonged freezing conditions by the use of a suitable central heating system antifreeze.

GUARANTEES

The unique heat exchangers of Grant Boilers are covered by a 5-year guarantee. All other component parts of the boiler are guaranteed for 2 years from the date of purchase, subject to being installed in accordance with the manufacturers instructions. There are also optional annual or 3 year extended warranty schemes available. On completion of the installation all Grant boilers should be commissioned and the guarantee registration form returned to Grant UK.

AFTER SALES SERVICE

For peace of mind, all Grant boilers are backed by a national network of independent service engineers. In the unlikely event of a problem occurring, your installer should telephone our Customer Service Department on: **0870 7775553**

EFFICIENT HEATING SOLUTIONS

GRANT COMPANY PROFILE

ESTABLISHING THE FUTURE OF HEATING TECHNOLOGY

With an established history of over 30 years designing, manufacturing and supplying a wide range of highly efficient and reliable products, Grant has become a firm favourite for many heating engineers and householders when choosing a new or replacement oil-fired boiler.

The Company has achieved an enviable reputation within the heating industry for its approach to new concepts like the innovative Outdoor Module Range and more recently condensing technology. Today, the Grant product range extends to over 40 model variations with outputs to suit all domestic and small commercial applications.

ENDORSED AT THE HIGHEST LEVEL

Grant products and facilities have been endorsed at the highest level with the Grant Vortex range being named 'Domestic H&V Product of the Year 2003' and the Training Centre winner of 'Training Initiative of the Year 2004' both in the prestigious H&V News Awards for Excellence - known in the Trade as "The Oscars of the Heating Industry". Grant's training facilities were also acknowledged recently when they were awarded OFTEC Training Centre of the Year.

No other company in the domestic oil heating industry has ever received this level of recognition for product design, high quality engineering, innovation and training.

It was also the first time in the history of the H&V News Awards for Excellence that an oil-fired boiler has won the coveted trophy.

LESS HARM TO THE ENVIRONMENT

The Grant range of fully automatic pressure jet oil-fired boilers have been designed to comply with the OFTEC Standard OFS A100 (EN303 Part 4) and meet the requirements of the new European Boiler Efficiency Regulations.

Older oil-fired boilers, designed at a time when very little consideration was given to environmental issues, can operate with efficiency levels as low as 65%. A modern Grant oil-fired boiler has been tested and approved to operate at the very highest efficiency levels, achieving a considerable reduction in harmful emissions. In particular their low NOx emissions and clean combustion, means the latest Grant boiler range are some of the most environmentally-friendly oil-fired central heating boilers you can buy. Installing a Grant boiler can also save money as the higher efficiency means you will burn less fuel, making it more economical to run.

QUALITY DESIGN

Despite the sophisticated technology employed in the development of new products, Grant's design engineers have kept true to the original Grant concept of simplicity in installation and maintenance which are essential ingredients of today's heating systems. Grant products are manufactured from the highest quality materials and designed not just to meet, but to exceed all relevant performance and environmental standards.

Backed by highly efficient administration and Grant's comprehensive extended warranty schemes, the Company is also focused on providing an exceptional aftersales service for all of its customers.

REST ASSURED

When you order a Grant boiler or flue system you can be secure in the knowledge that you are purchasing the best quality and most reliable product from a long established independent oil heating specialist. Our policy has always been, and always will be, total commitment to the environment we live in and the customers we serve.

OIL HEATING TECHNOLOGY

EZ-FIT FLUE SYSTEMS

All Grant boilers are supplied for connection to either a 'stainless steel' conventional flue, or one of Grant's EZ-Fit flue options. EZ-Fit flue kits feature self-sealing ducts which reduce installation time and ensure a perfect seal without the need for mastic or tape.

The flue systems are available as low level, high level, or vertical kits for internal and external applications, and even as unique EZ-Flexi Packs, designed to enable condensing boilers to utilise an existing chimney.

A colour coding system has been introduced to simplify flue selection, and a comprehensive guide is available which provides detailed information on all Grant EZ-Fit Flue options. Details are also available on our website:

www.grantuk.com

THE ADDED BENEFITS OF GRANT'S BALANCED FLUE BOILERS

At Grant, we have developed an external low level balanced flue terminal that is not adversely affected by strong winds. Another unique feature is a sealed burner, making Grant balanced flue boilers exceptionally quiet in the kitchen environment.

CONDENSING PRODUCT RANGE

Grant also produce a range of SEDBUK A Rated Condensing Oil-fired Boilers. For details of these high efficiency products a separate Grant Vortex Condensing Range brochure is available via our sales hotline on **0870 7775553** or via our website: www.grantuk.com

GRANT MULTI PASS BOILER RANGE

GREATER EFFICIENCY

The Multi Pass range was designed with efficiency in mind and has outputs from 50,000 Btu/h to 200,000 Btu/h and models up to 90,000 Btu/h are designed to kitchen modular dimensions. The space-saving blue boiler house versions, with outputs ranging from 70,000 Btu/h to 200,000 Btu/h, are the answer where the boiler is installed in a garage or outhouse.

The Multi Pass boiler's advanced design forces hot gases through its unique, patented, heat exchanger up to a distance of approximately 6.8 metres (22ft), holding them in contact with the boiler surface area for longer. This process vastly increases the amount of heat transferred to the water jacket enabling the boiler to operate continually at much higher efficiencies whatever the output.

MULTI PASS HEAT EXCHANGER

SEALED SYSTEM BOILERS

There are 3 Multi Pass system kitchen boilers available with outputs from 50-140,000 Btu/h. These models are supplied with the 'Sealed System Kit' factory-fitted and also include a circulating pump within the boiler casing. Multi Pass Boiler House models and larger kitchen models are also suitable for Sealed System operation.

GRANT EUROFLAME BOILER RANGE

ECONOMICAL EFFICIENCY

There are eight 50-120,000 Btu/h Euroflame models to choose from which include three (white cased) kitchen/utility models, three (blue cased) boiler house models and two white cased Sealed System models.

The Euroflame's unique system of internal baffles force the hot gases to travel up to 8 1/2 feet (2.6 metres) on 50/70 models, 11 feet (3.5 metres) on 50/90 and 21 feet (6.4 metres) on 90/120 models. These designs vastly increase the heat absorbed by the water jacket, improving efficiency and providing highly cost effective central heating and hot water.

EUROFLAME
HEAT EXCHANGER

SEALED SYSTEM MODELS

Sealed System models are supplied with a concealed factory-fitted control panel and factory-fitted sealed system kit, comprising 12 litre expansion vessel, filling loop with isolation valves, pressure gauge, automatic air vent, pressure relief valve and circulating pump, neatly housed within the casing.

GRANT OUTDOOR MODULE RANGE

THE UNIQUE MONEY-SAVING OUTDOOR MODULE

An innovation in central heating, the Grant Outdoor Module cuts cost dramatically as little or no building work is necessary. It comes complete with a built-in multi-directional low level flue and can be either fixed against any suitable external wall, or installed freestanding allowing for the necessary clearances around the flue terminal. A conventional flue starter elbow is also available, allowing the flue to run vertically when siting conditions restrict low level applications (see Green Flue System).

Their advanced heat exchanger design forces the hot gases through a patented baffle system. This process vastly increases the amount of heat transferred to the water jacket, enabling the boiler to operate continually at much higher efficiencies.

EXTERNAL FINISH

To increase the versatility of the unique outdoor module range, a high quality 'external' powder coated paint finish is applied to the existing galvanised steel casing, eliminating the need to prime or paint appliances on site.

SEALED SYSTEM AND COMBI MODELS

The optional sealed system kit can be neatly housed within the enclosure of the module. A filling loop and pressure gauge is supplied as part of the kit, for fitting in a convenient location within the building, between the cold main and central heating system. Outdoor Combi Modules are supplied with a Sealed System Kit factory fitted.

GRANT COMBI BOILER RANGE

INSTANT HOT WATER AT MAINS PRESSURE

A Grant Combi boiler provides both central heating and hot water at mains pressure. Factory set to 70,000 Btu/h (Euroflame Combi 70 V3), 90,000 Btu/h (Multi Pass Combi 90 V3) and 113,000 Btu/h (Multi Pass Combi Max), they are designed for use on a sealed heating system, with all the necessary components housed within the compact and elegant white casing.

Using the primary water stored in the boiler, for rapid response to a demand for hot water, and with quick recovery after hot water operation, the Grant Combi can provide ample amounts of hot water instantly, whenever required, night and day. A factory-set thermostatic blending valve ensures a stable control of the hot water temperature, minimising fluctuations caused by other taps being turned on!

Grant Combi boilers are designed to be installed beneath standard height kitchen worktops. The Combi 90 V3 and the Combi Max only require access from the front for routine servicing, whereas the Combi 70 V3 needs a removable section of worktop for service access and maintenance operations.

The V3 range incorporates Grant's new electronic temperature control, low system pressure warning and fully valved connections, which enables pipework to run to the left or right hand side of the boiler. All models comply with the OFTEC Standard OFS A100 (EN303 Part 4), and are the ideal choice for the replacement of old appliances, leading the way in the energy efficient provision of central heating and hot water in small to medium sized homes.

ENJOYING THE TWIN BENEFITS

An oil combination boiler provides the benefits of highly efficient oil central heating, combined with instant hot water.

The savings are considerable in cost and space. You save space because unlike a conventional system there is no need for a hot water cylinder in the airing cupboard, or cold water header tank in the loft (not forgetting all the extra pipework!). So you save money as there is no need to pay to store hot water.

Furthermore, you will never have to wait for a 30-gallon cylinder to heat up because you've run out of hot water! You can have bath after bath, time after time. And, of course, because a combi provides

hot water direct from the cold mains, you'll enjoy powerful, invigorating showers.
